

GENDER PERSPECTIVES IN EUROPE: PAY GAPS, LIFE EXPECTANCY & POPULATION (2020-2022)

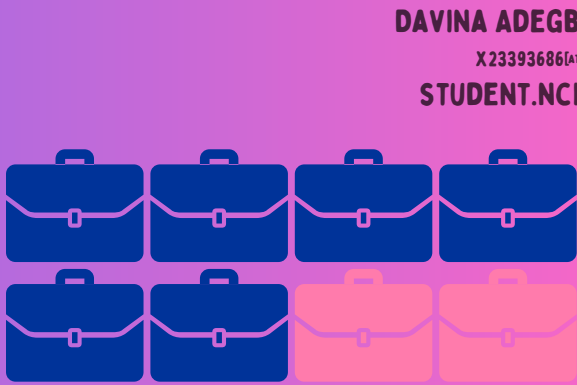

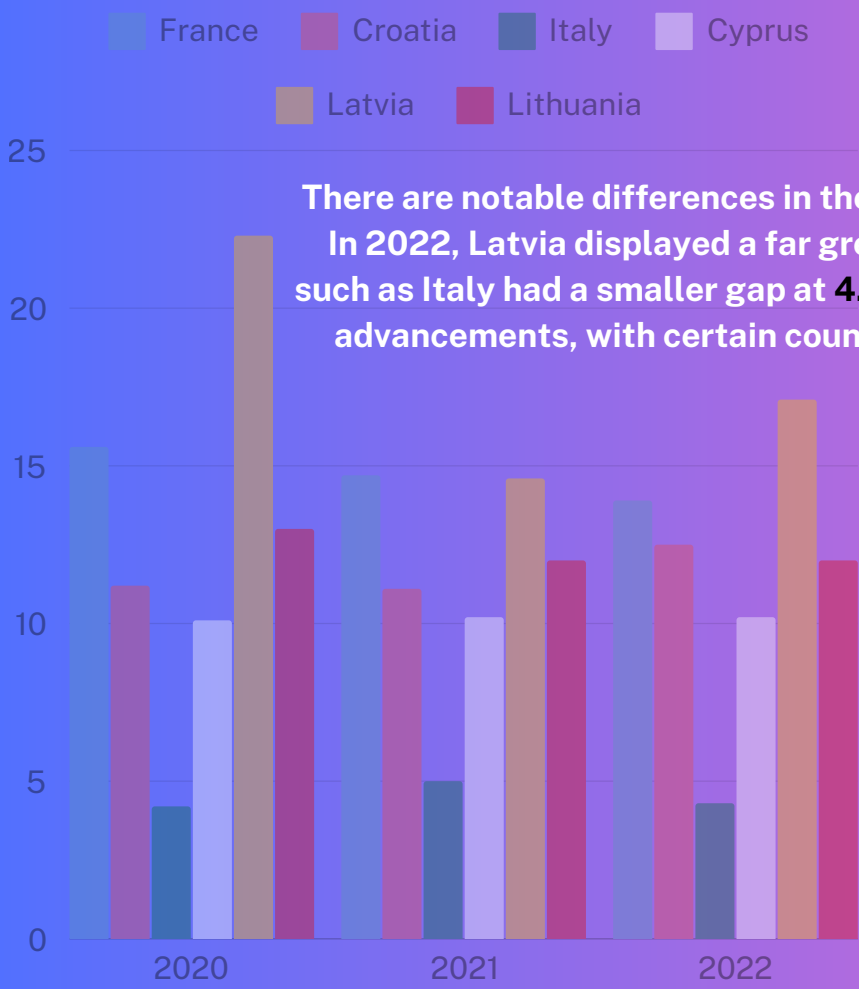

POPULATION BREAKDOWN

In six chosen European nations, women comprise **51.5%** of the population, while men make up **48.5%**. While smaller countries like Cyprus and Latvia have comparable gender distribution trends, the largest populations are found in France and Italy. This demonstrates a persistent pattern of a marginally larger female population throughout Europe.

MALE LIFE EXPECTANCY

FEMALE LIFE EXPECTANCY

With life expectancy of **84–85** years for women and **79–81** years for men in nations like Italy, Cyprus, and France, women regularly outlive men in every country. Males in Latvia and Lithuania are between **68** and **71** years old, while females are between **79** and **80** years old.
